

Withdrawing cash from an ATM: A user guide

This guide shows you how to withdraw cash from an ATM securely and handle common issues.

Prerequisites

Before approaching the machine, ensure you have:

- Your debit card.
- Your Personal Identification Number (PIN) memorized.
- A clear view of your surroundings to ensure your safety.

Withdrawal steps

1. Insert your card into the slot with the chip facing up and going in first.
2. Choose your preferred language from the screen options.

 **NOTE:** Once you select your preferred language, all instructions on the screen will be displayed in that language for the rest of the transaction.

3. Enter your 4-digit PIN using the keypad.

 **WARNING:** Never share your PIN with anyone, including bank employees. Your bank will never ask for your PIN over the phone or via email.

 **TIP:** Cover the keypad with your other hand while entering your PIN.

4. From the main menu, select **Withdrawal**.
5. Select the account type you want to withdraw from, such as Savings, Current, or Credit.
6. Enter the amount you want to withdraw.

 **NOTE:** Enter an amount in multiples of 100, 200, or 500.

7. Confirm the transaction (or select **OK / Enter**) when prompted.
8. Retrieve your card immediately when the machine prompts you.

 **WARNING:** ATMs will not dispense cash until the card is removed.

9. Collect your cash.
10. Select whether you want a printed or digital receipt.

Safety notes

Follow these precautions to stay safe at the ATM.

- If the card slot looks loose, crooked, or has extra plastic attached to it, do not use it. This could be a "skimmer" used by thieves to steal your card data.
- Always stand directly in front of the screen to block the view of bystanders.
- Use ATMs in well-lit, high-traffic areas or inside a bank whenever possible. This reduces the risk of theft.
- If the machine does not dispense cash but your account is debited, do not leave the ATM. Call your bank's helpline immediately.

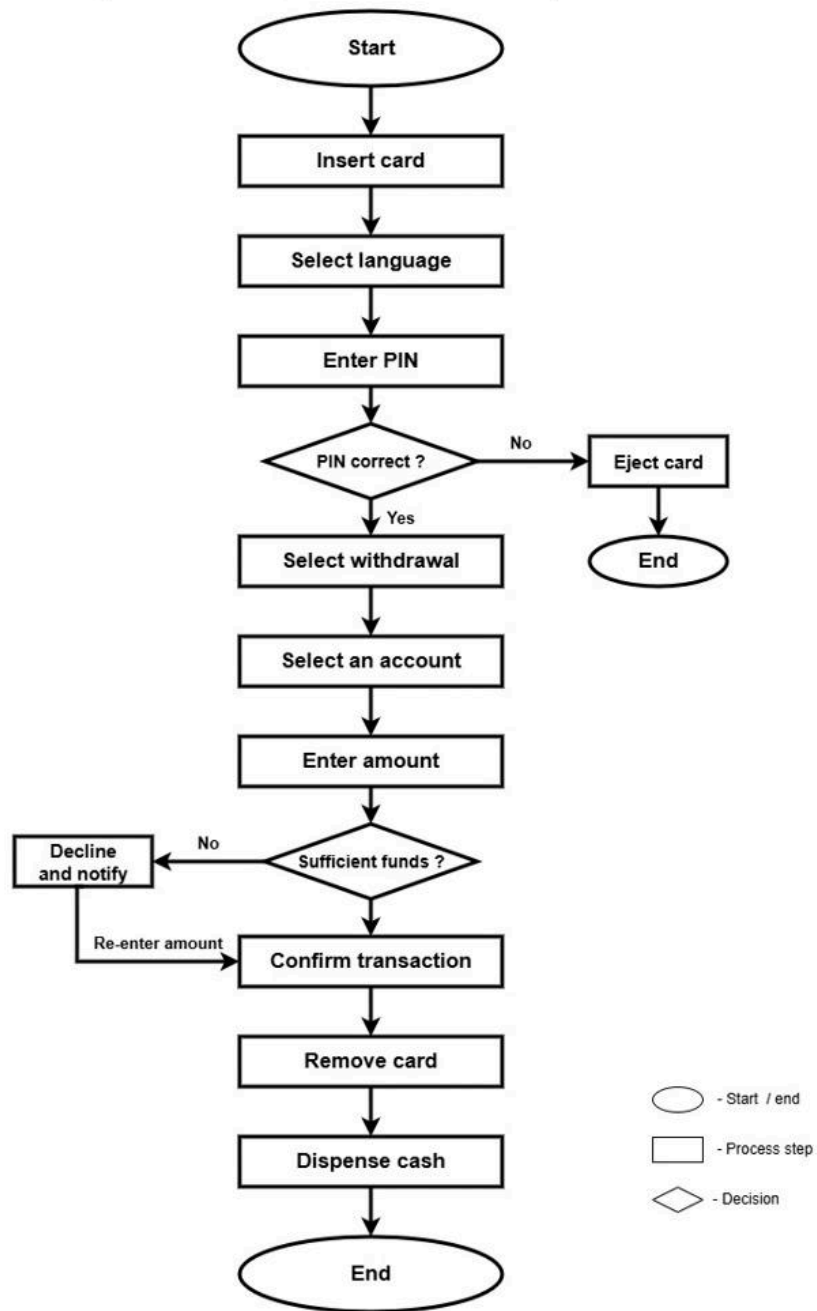

Support and troubleshooting

If you encounter issues during your transaction, such as the machine not dispensing cash or your card being retained, follow these steps:

1. Do not leave the ATM.
2. Call the bank's 24/7 helpline immediately. The number is usually located on a sticker on the machine or on the back of your card.
3. Note the ATM ID printed on the machine and provide it when speaking with a representative.

The following flowchart shows the standard step-by-step process for a successful cash withdrawal.
