

Withdraw cash from an ATM

This guide explains how to withdraw cash from an ATM securely and handle common issues.

Prerequisites

Before approaching the machine, make sure you have:

- Your debit card.
- Your Personal Identification Number (PIN) memorized.
- A clear view of your surroundings for your safety.

Steps to withdraw cash

1. Insert your card into the slot with the chip facing up and going in first.
2. Choose your preferred language from the screen options.

 **NOTE:** After you select a language, the ATM displays all instructions in that language for the rest of the transaction.

3. Enter your 4-digit PIN using the keypad.

 **WARNING:** Never share your PIN with anyone, including bank employees. Your bank will never ask for your PIN over the phone or by email.

 **TIP:** Cover the keypad with your other hand while entering your PIN.

4. From the main menu, select **Withdrawal**.
5. Select the account type, such as Savings, Current, or Credit from which you want to withdraw.
6. Enter the amount you want to withdraw.

 **NOTE:** Enter an amount in multiples of 100, 200, or 500.

7. When prompted, confirm the transaction by selecting **OK** or pressing **Enter**.
8. Retrieve your card when the machine prompts you.

 **WARNING:** ATMs do not dispense cash until you remove your card.

9. Collect your cash.
10. Select whether you want a printed or digital receipt.

Safety precautions

Follow these precautions to stay safe at the ATM.

- If the card slot looks loose, crooked, or has extra plastic attached to it, do not use it. This could be a "skimmer" used by thieves to steal your card data.
- Always stand directly in front of the screen to block the view of bystanders.
- Use ATMs in well-lit, high-traffic areas or inside a bank whenever possible. This reduces the risk of theft.
- If the machine does not dispense cash but your account shows a debited, do not leave the ATM. Call your bank's helpline immediately.

Support and troubleshooting

If you encounter issues during your transaction, such as the machine not dispensing cash or your card being retained, follow these steps:

1. Do not leave the ATM.
2. Call the bank's 24/7 helpline immediately. The number is usually located on a sticker on the machine or on the back of your card.
3. Note the ATM ID printed on the machine and provide it when speaking with a representative.

The following flowchart shows the standard step-by-step process for a successful cash withdrawal.
